

1. Difference between Apps, objects, Records, fields.

Ans: APP: collection of tools

objects: Database that stores related data

Records: Rows of objects, stores specific data

Fields: columns, stores data.
→ single piece of information

2. standard vs custom object

Ans:

* standard objects are objects that are included with Salesforce. common business objects like account, contact, lead, and opportunity are all standard objects.

* custom objects are objects that you create to store information that's specific to your company or industry.

3. Formula Fields

Ans: * The powerful tool that gives you control of how your data is displayed.

Example: we can use formula fields for
→ To calculate how many days are left until an opportunity's close date.

4. Validation rules

Ans:

* validation rules verify that data entered by users in records meets the standards you specify before they can save it.

* It can contain a formula or expression that evaluates the data in one or more fields and returns a value of "True" or "False".

Example: you can ensure that all phone number fields contain a specified format or that discounts applied

to certain product never exceed a defined percentage.

5. college data model

objects: college / Department

program

course

section

student

Faculty etc...

Relationships: college has many dept

• Department offers many program

• program has many courses

• course has many sections
